Objective:

To obtain work and life experience in the start-up industry though having an active role in shaping beautiful products with pleasurable straight-forward user experiences.

Experience:

Budsies LLC
New York, NY

March 2013 to May 2013

Consultant for early-stage startup that converted children's drawings into stuffed animals. Responsible for backend transaction system created in Rails and Stripe as well as implementing the front-end from pre-existing mockups.

Beaconr
Seattle, WA

May 2012 to February 2013

Co-founder of a start-up that allowed creators to make money from self-publishing any downloadable medium and users to discover content relevant to them. Dedicated front-end side of the project whose obligations included proposing user flows, designing assets in Photoshop and Illustrator, creating responsive interfaces in HTML & SASS, and programming all front-end interactions including CSS transitions, file uploads, and Ajax calls.

Stockslant
Wellesley Hills, MA

March 2011 to April 2011

Created a working prototype of a web service that compiled press and media releases for publicly traded companies searchable by their ticker symbols as a high school senior project. Created an NLP algorithm that gave feedback in a human readable green/red format based on the aggregate word positivity of articles which helped traders gauge holistic sentiment.

All About Eyes Optometry
Anaheim Hills, CA

June 2010 to August 2010

Assisted the head doctor in note-taking and pretesting patients and worked with a diverse range of personalities. Headed technology which primarily consisted of networking new systems and keeping an informational site live. Conceptualized and programmed software for a touch screen that allowed patients to sign in and complete a range of common actions that consistently tied up staff.
